

## Review 2.2

We have included all the comments in the edited text; the modified parts are highlighted in blue. The suggestions were incorporated as follows:

provide the key findings/quantitative results for abstract enhancement, which is still missing. Add algorithm name and detail of "significant benchmark suite".

The abstract has been extended with (short) sentences that address the proposed points. As can be seen from the coloring, half of it has been rewritten.

Also include the detail or name of simulation/experimental platform.

We specified these details at the beginning of the computational results section (this was definitely an oversight on our part).

Add minimum three more keywords

We added three new keywords.

Delete "our" from the paragraphs. In lieu of this you can write, "for the proposed study", "for this study" etc.

We made sure that the current text does not contain the word 'our' at all.

Merge the lines to make a single paragraph from lines 82-99

We merged the lines.

Add the X-axis caption for Figure 4, X-Y axis captions for Figures 6, 7 & 8. Also add legends and Axis captions for the Figure 9.

We made sure that all plots have legends and axis captions.

A few areas for improvement are still needed for English Language

We used a syntax and style editor to proofread all the text. Some sentences did indeed need improvement.
